

*There's a growing demand for enhanced coffee menus that require large quantities of frothed milk and warm water.*

The Smart Boiler Technology significantly boosts hot water and steam productivity as it optimizes the boiler refilling and the thermal balance for an always perfect in-the-cup result.

Thanks to this special software, the boiler is kept at its maximum steam pressure at all times ensuring no down time during peak business hours.

## STANDARD BOILER

The boiler fills with water until the water level comes in contact with the probe.

## SMART BOILER

The boiler fills with water in small increments every time the machine is used.
